

Ndepth Database Assessment Services – A Series of Database Health Checks

Your business is thriving. Revenues are up, your employees are productive, and your systems are running well. Then tragedy strikes. One of your critical databases fails and work comes to a halt. You and your IT team are taken by surprise. Your business is at risk and all hands are on deck to evaluate and fix the problem. Why didn't you – or your IT team – see this coming?

Data problems can have a domino effect. One minor problem can trigger a chain of events that can bring down your database and your business.

This is why The Total Data Experts from Ntirety® offer Ndepth™ Database (DB) Assessment Services. Using a combination of commercial tools and Ntirety scripts, a seasoned database expert examines and analyzes your database(s) to rate its health and perform an impartial assessment of any risks or opportunities for improvement.

Why Choose Ndepth Database Assessment Services

Get Access to World-Renown Database Experts

Ntirety's database gurus are recognized industry experts who bring database and industry expertise, IT best practices, and a defined methodology to any project.

- > **Database expertise** – Each Oracle team member has an average of 20 years of Oracle experience; each SQL team member has an average of 13 years of SQL experience.
- > **Industry expertise** – Ntirety serves businesses across a wide array of industries including financial services, healthcare, insurance, manufacturing, and telecommunications. We understand your business and your IT operations.
- > **Best practices and a proven project methodology** – Ntirety's management and support teams bring knowledge, vast experience, and a track record of continued success – all of which have culminated in the development of well-defined, industry best practices and a unique methodology that they bring to every project.

With Ntirety Database Assessment Services, Discover How You Can:

- > Improve database performance
- > Maximize database availability and reliability
- > Boost employee productivity
- > Enjoy peace of mind and be confident in your database environment

Discover Your Database Environment

Ntirety delivers a variety of different database assessment services to evaluate your database and cloud environments. Its methodology for database assessments includes data collection, analysis, and review phases. During the review phase, Ntirety presents all documentation and recommendations regarding the findings and any necessary remediation. The Ntirety team is then available to assist you with the implementation of any recommendations once you approve those efforts.

With Ndepth Database Assessment Services, you will discover how to improve database performance, maximize database availability and reliability, boost employee productivity, and enjoy peace of mind knowing that your databases are operating at maximum efficiency.

Choose from a Variety of Ndepth Database Assessments

Depending on your needs, you can choose from a variety of specialty database assessments including:

Ndepth Core Database Assessment. From configuration and recoverability, to maintenance and security, this assessment evaluates all major aspects of your database environment.

Ndepth Database Performance Assessment. Evaluates critical components and database performance focusing on indexes to ensure your DB performance isn't negatively impacting overall application performance.

Ndepth Advanced Database/Application Performance Assessment. This assessment provides an in-depth analysis of your database infrastructure – including a review of database best practices, index usage, SQL code performance, and growth modeling – to identify the root cause of application performance issues, determine whether your current server specifications can support your current workload, and delivers recommendations on what resources you need for future growth.

Ndepth Database Consolidation/Virtualization Assessment. Includes a thorough review of the databases in your environment to assess how you can eliminate database sprawl and create an implementation plan to move to a virtualized environment.

Ndepth Database Upgrade/Migration Assessment. Evaluates your database environment to determine the impact of upgrading or migrating your databases; includes recommending a plan and the preparation steps necessary to make for an easy, fast, and more predictable process.

Ndepth Database Security Assessment. A best practice review of your IT environment, configurations, and all parameters at the database, instance, and operating system level provides you with recommendations and remediation services to detect a breach, prevent threats, and protect and preserve the integrity and security of your data.

Supported Environments

Ntirety can provide database assessment services on Microsoft SQL Server, Oracle, or MySQL databases residing in traditional data centers, hosted data centers, Amazon Web Services (AWS), or Microsoft Azure™.

About Ntirety

Gain deep insight from the database gurus

Comprised of the world's most enlightened database gurus, Ntirety's quality-driven team has worked with Oracle since version 3.0, and bring that same level of expertise to Microsoft SQL Server and MySQL. Our staff of experts has contributed their knowledge and shared their wisdom of the database sector by authoring many volumes on these key systems.

With every engagement, we deliver database enlightenment to our clients, mindfully monitoring the quality of our service and client outcomes. We take this so seriously that our teams' compensation is based on the results of customer quality surveys. All to ensure that our clients receive the best possible service.
